Cracking Adobe Photoshop is a bit more involved, but you can do it. First, you'll need to locate a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

The main new feature introduced is the *Feedback Panel*. This is where users are invited to leave comments. I don't know why you couldn't have left them in the PS Options dialog, but there they are, in a well-organized, structured panel. The panel is split into 4 tabs. The first one is *Edit History*; the second one, *Review History*. The third one is your Feedback Map. The last one is the *Business Chat* tab. Comments are grouped into different areas, and the entire toolbox has a new look. The *Edit History* tab is effectively a track history of suggested edits you have done to your document; the *Review History* tab is a mini-navigation menu, listing the documents you've opened or closed; the Feedback Map tab features a map that shows you where reviewers are posted to review a document. The *Business Chat* tab is where you chat with others. In the previous version, you had to add your contact information to the *URLs* of your colleagues. Lightroom 5 and beyond allows you to just easily send them a request or a comment without giving any additional information hence giving them a list of contacts just for you. The *Add Comments* menu bar is a useful feature. For instance, if you add a comment to a group of comments then the group is added to the *Edit History* or the *Review History*. Default operations and new functionality are not the same thing, though, so I actually always try to keep up with PS updates. I'm a Photoshop veteran and won't get a preview of a new feature. I'm also not a fan of a lot of new UI elements, though it is understandable that some of what's been added requires additional customization.
