This is the fifth version of Photoshop I have experience with (in all likelihood, the 11th), and I downloaded it again this week to work on a project that I did not have the time to finish the first time around. Its pretty much the same, but much improved in some areas, and I shortly expect some big changes to happen on the web as well. It has a lot of smart AI features. They are mostly in taking care of the editing process, but it's there. It's been a really great journey so far, and I continue to learn new things each day. This is the only product that I don't think taxes should be abused, because the product is BLOODY PLAIN SOLIDLY UNION BLOODY IGNORAMUS GUTLESS TEAT BURSTING FASCIST MOVE OF ANIMAL ORIGIN BLOODY STUPIDITY. It's almost like it should cost \$100,000 (say C\$100,000, no need to be all precise with money, it's a metaphor) but of course, it's not. It's basically just an API for the dark side of the moon that has to do with plugging in data to processes that can be done in a few key strokes in the terminal. So it's blively evident that it's a program for people that would never leave the planet were it not for the Internet. It's like Windows XP whose primary purpose in life is to continue to act as the other end of a phone line to a baby. It's an amazing piece of technology, but it's made up of the same unholy combination of kludgy human-made crap that they were forced to use in 1972 when they designed Unix, because they couldn't be arsed to build the OS out of scratch. Because of the halo and the huge amount of people that have a significant investment in the platform, they will not willingly change the way they do something. It's a product that makes me feel like a halfwit updating/installing some piece of shit piece of software that I would never install on my own stationary computer running Windows.

Use the Lasso tool to create a marquee around any shape or content by clicking once to define an area, then click and drag to select it. The 100% selection tool works similarly, but adds to the area selected. With the Polygonal Paint brush, you can fill a selection with dots to create any polygonal shape. The 100% Eraser tool lets you use any of these tools, or a combination of them, with as much control as you want. The Image Tracing Profiler tool creates a curve for the luminance-based brightness of the color in your image so you can see what needs trimming. The channel mixer lets you compare the differences between color channels, and the color corrector helps you bring out detail in shadows and highlights. The warp tool lets you stretch and flip parts of your image to create new compositions. The Adjustment Brush lets you make quick adjustments to the entire image. You can add 3D effects, such as vignettes, depth-of-field, glows, and reflections, and 3D-enabled presets and filters to your projects. The Camera RAW plug-in lets you apply RAW-format settings to your photos so you can use the full range of creative possibilities with RAW photography. Photoshop is now also equipped with its own Neural Network, a machine-learning system that predicts the next action for the user before completing it. The March 2019 update introduces new

advanced camera native profiles thanks to the new Photography Module in the Color Profiles panel. You can use these profiles to automatically create perfectly matching color profiles for your camera from across a wide range of camera models.
