Call of Duty: Modern Warfare 3 torrent. For a compact video codec, the dominant computational cost is the motion search, which typically is the most time-consuming operation. To accelerate the search, a popular approach is to exploit the temporal redundancy. In this work, we examine the ability of motion-based compression (MBC) to reduce decoding complexity. Specifically, we explore the usage of the temporal-mode-prediction (TMP) information to support frame-level decoders. By simply using a high-complexity decoder for frame-level prediction, we generate suboptimal prediction frames but reduce significantly decoding time. To further improve this idea, we propose an optimized MBC mode to efficiently use TMP information for frame-level prediction. We compare the complexity of the original MBC, the optimized MBC, and the control (prediction-only) method in terms of both the rate-distortion curves and frame-per-second (FPS) performance in practice. We observe that the optimized MBC significantly outperforms the control method, achieving up to 4.3 dB gain and 3.9x speedup in PSNR and PSNR-L1 on a mobile phone. We also propose a set of practical experiments for video coders in an H.264/AVC/HEVC basis including SCMV/SCMV2/SCMV2.2, codecs designed for small screen devices like mobile phones. Our work shows that motion-based compression can be efficiently applied to practical video codecs while reducing complexity in a controllable way
